

Defibrillation Pads and Cables

A complete line of disposable multifunction electrodes for defibrillation, synchronised cardioversion, external cardiac stimulation and ECG monitoring. They are easy to use and allow simple, specific clinical performance in both emergency and elective uses. The high quality gel adhesive sticks perfectly to the patient’s skin and grants a homogeneous and uniform distribution of the current across the conductive surface of the pad. The low impedance values offer a low stimulation threshold and allow an effective transcutaneous non-invasive pacing with minimal discomfort for the patient. Cables are the right length and safety anti-shock connectors allow the direct connection (without any adaptor) to most defibrillator devices. Some models present the cable and the terminal connector outside the pouch. These are intended for emergency situations, to save time in connecting pads to the defibrillator before opening the pouch.

F79XX Adult Radiopaque and F79XXW Adult Radiopaque (Cable Outside)
F77XX Adult Radiotransparent and F77XXW Adult Radiotransparent (Cable Outside)
 For patients with a minimum body weight of 25kg (55 pounds).

F79XXP Paediatric Radiopaque and F79XXPW Paediatric Radiopaque (Cable Outside)

F77XXP Paediatric Radiotransparent and F77XXPW Paediatric Radiotransparent (Cable Outside)

For patients under 8 years of age and with a body weight between 5kg (11 pounds) and 25kg (55 pounds). The defibrillation power should be selected based on patient body weight.

F79XXPL Paediatric AED and F79XXWPL Paediatric AED (Cable Outside)

The power reducer allows the direct connection between pads and AED.
